LSCBench secure-code comparison: DeepSeek Flash (Claude Code) vs Mistral Large 4 (Vibe)

Consolidated report: the 150-task function-level run (headline) and the 30-task pilot (repeat run). Web version: https://lab.chris-wozniczek.dev/lab/lscbench. Raw results: https://github.com/chris-wozniczek/lscbench-deepseek-vs-mistral.

TLDR

- DeepSeek Flash in Claude Code 2.1.143 (effort max) wrote working and secure code on 39 of 150 tasks (26.0%, 95% Wilson CI 19.6 to 33.6%). Mistral Large 4 in Vibe 3.1.3 (thinking high) did it on 29 (19.3%, 13.8 to 26.4%).
- Both almost always produce working code: 144 and 143 of 150 pass the functional tests. On 100 tasks both models' code worked and both reintroduced the vulnerability.
- Paired on the same tasks: 26 both secure, 13 only DeepSeek, 3 only Mistral, 108 neither. Exact two-sided McNemar p = 0.021.
- Agent time per task, median / p90: DeepSeek 3.0 / 11.5 min, Mistral 5.8 / 21.9 min.
- Cost for 150 tasks: DeepSeek $6.25 (official API usage at list price), Mistral $42.87 API-equivalent (run on a subscription). Per secure solve: $0.160 vs $1.478.
- Repeat: the 30-task pilot, run a day earlier on a different machine with the same settings, gave the same outcome on 28/30 tasks for DeepSeek and 27/30 for Mistral. The pilot is not pooled with the 150 run.
- Vibe's launcher let Mistral kill its own agent on 12 trials. Re-running those 12 with the prompt passed from a file left Mistral at 29/150 (one gain, one loss). This is a sensitivity check only; the headline is unchanged.
- Scope: the 150 function-level tasks of LSCBench v1.0, not the official 450-task score. It compares model plus agent, not bare models. Published LSCBench traces for the same 150 tasks (GLM-5.3 37, DeepSeek-V4-Pro 34, Qwen3.8-Max 34, Claude-Fable-5 33, GPT-5.6-Sol 30, Kimi-K3 27) are context from other runs, not part of this experiment.

How the two runs fit together

	150-task run (headline)	30-task pilot (repeat)
Tasks	All 150 function-level tasks	30 of the same tasks, seed 20261120
Date	21 Nov 2026	20 Nov 2026
Host	VPS, 16 cores, separate Docker daemon	Cloud VM
Concurrency	5 trials per model	3 trials per model (2 for re-runs)
DeepSeek works and secure	39/150	7/30
Mistral works and secure	29/150	8/30
DeepSeek / Mistral median agent time	3.0 / 5.8 min	1.9 / 6.8 min
DeepSeek / Mistral cost	$6.25 / $42.87	$0.90 / $6.60
Head-to-head (DS only / M only)	13 / 3, p = 0.021	1 / 2, p = 1.0

Repeat on the 30 shared tasks (pilot vs 150 run, works-and-secure):

	Both runs secure	Pilot only	150 run only	Neither	Same outcome
DeepSeek Flash	7	0	2	21	28/30
Mistral Large 4	6	2	1	21	27/30

Who ran it: the harness, runs and analysis were done by Devin (Cognition's coding agent) on Chris Wozniczek's server. Every number is computed from the raw logs in the GitHub repository.

Part 1 below is the full 150-task report. Part 2 is the full pilot report.

Part 1: 150-task run

Caveat: all 150 `*_function` tasks of LSCBench v1.0 (one of three tiers; the official score uses all 450). Not an official LSCBench leaderboard score. Each arm is a model **plus** its agent harness (Claude Code 2.1.143 for DeepSeek, Vibe 3.1.3 for Mistral), so differences are not pure model differences.

Setup

Setting	DeepSeek arm	Mistral arm	Shared / notes
Agent + version	claude-code 2.1.143 (`lscb_agents:ClaudeCodeFallbackInstall`)	vibe 3.1.3 (`lscb_agents:VibeNoPluginCache`)	Same wrappers as the 30-task pilot
Model ID	deepseek-flash	mistral-large-4-0	-
Reasoning	effort=max	thinking=high	-
Provider + endpoint	https://api.deepseek.com/anthropic (official API)	https://api.mistral.ai (Vibe CLI, Mistral plan)	Only these hosts allowed from the agent
Harness / dataset	Harbor 0.26.0	Harbor 0.26.0	last-secure-code-benchmark@v1.0, all 150 `*_function` tasks
Concurrency	5 trials	5 trials	Both arms concurrent; 8 strided batches of 18–19; retries 0
Host	-	-	Factory VPS: 16 vCPU, 62 GB RAM; separate Docker 29.9.2 daemon under [path] (isolated from Otter)
Run window (UTC)	2026-11-21 00:39:02	2026-11-21 14:31:01	First and last runner event; timeline below

Headline

Metric	DeepSeek Flash / Claude Code	Mistral Large 4 / Vibe
Works and secure (reward)	39/150 (26.0%, 95% CI 20–34%)	29/150 (19.3%, 95% CI 14–26%)
Works (functional)	144/150 (96.0%, 95% CI 92–98%)	143/150 (95.3%, 95% CI 91–98%)
Secure	39/150 (26.0%, 95% CI 20–34%)	29/150 (19.3%, 95% CI 14–26%)
Trials with an exception	7	15
Median / p90 agent time per task (min)	3.0 / 11.5	5.8 / 21.9
Input tokens (cached share) / output tokens	484.9M (98%) / 5.53M	387.7M (97%) / 4.36M
Cost (official rows)	$6.25 billed (DeepSeek list price)	$42.87 API-equivalent (covered by the Mistral plan)
Cost per secure solve	$0.160	$1.478
Official rows without token telemetry	0	3

Head-to-head on the same tasks

Both secure	DeepSeek only	Mistral only	Neither	Exact McNemar p
26	13	3	108	0.021

Published results on the same 150 function tasks

From the upstream `traces/catalog.json` (Claude Code / Codex, max effort). Different agents and settings; context only.

Model (published)	Reward	Functional
GLM-5.3	37/150 (24.7%)	142/150
DeepSeek-V4-Pro	34/150 (22.7%)	126/150
Qwen3.8-Max	34/150 (22.7%)	145/150

DeepSeek cost check

Balance from the runner's guard log: first $14.98, last $7.99 (drop $6.99). Computed list-price cost of all DeepSeek trials in this report, including void ones: $6.43. Runs after the last guard sample are not in the drop.

What the models missed

Every official row with `secure=0` (security miss) or `functional=0` (functional miss). Full rows are in `data/trials.csv`.

Vibe self-termination (Mistral)

Harbor's Vibe adapter passes the task text on Vibe's command line (`--prompt=<text>`). When the model runs `pkill -f <pattern>` and the pattern also matches text in the prompt, it kills its own Vibe process (exit 143). Claude Code receives the prompt differently, so the DeepSeek arm cannot hit this. Main-run results keep these trials as scored attempts (the verifier grades whatever code exists).

Task	Batch	Exit	F	S	R
cve-2021-46104_function	b1	143	1	0	0
cve-2016-6897_function	b2	137	1	0	0
cve-2022-24840_function	b2	143	1	0	0

Task	Batch	Exit	F	S	R
cve-2017-17714_function	b6	143	1	0	0
deserialization_rpc_task_dispatch_function	b7	143	1	0	0
idor_hotword_update_function	b7	143	1	1	1
cve-2019-15150_function	b8	143	1	0	0

Sensitivity rule: Sensitivity re-run (reported separately, never replaces main-run results): every Mistral/Vibe main-run trial whose Vibe process ended with exit 143 (SIGTERM) or 137 (SIGKILL), rerun once with lscb_agents:VibePromptFile (prompt via --prompt-file, not argv). Rule and list fixed 2026-11-21 ~11:10 UTC after b1-b7 + partial b8, before any sensitivity run; b8 and b1rest trials matching the rule are appended when they finish.

run150-senssmoke-mistral-vibe	cve-2021-46104_function	1/0/0	1/0/0	-

Sensitivity view (not the headline): replacing the 12 affected Mistral trials with their prompt-file re-runs gives 29/150 reward for Mistral (main run: 29/150). Each re-run is a fresh sample, so changes mix the runner fix with normal run-to-run variation; DeepSeek trials were not re-run, so this is a check of the runner flaw, not a head-to-head. cve-2019-15150 ended with exit 143 again under `--prompt-file` (and Vibe's logs were again lost when the container's init process stopped), so that termination is not explained by the prompt being on the command line.

Void trials and re-runs

Policy: Same as pilot: re-run once only when a trial failed before the model got the prompt, or was killed by the benchmark's own harness/guard. In-run agent errors, timeouts and self-kills count as the attempt.

Run notes (verbatim)

150-task run - commands and settings (key-free)

- Host: Otter factory VPS (16 vCPU, 62 GB RAM, 522 GB free at start), isolated user `bench`, dir /srv/bench/lscb, separate dockerd `bench-docker.service` (socket /run/bench-docker.sock, data-root /srv/bench/docker, bridge bench0 10.210.0.0/24). Otter daemon/timers not used.
- Harbor 0.26.0, dataset last-secure-code-benchmark@v1.0, all 150 `*_function` tasks from notes/function_tasks.json.
- 8 strided batches (names[i::8], 18–19 tasks), both arms concurrent, `-n 5` per arm, `--max-retries 0`.
- DeepSeek: lscb_agents:ClaudeCodeFallbackInstall, -m deepseek-flash, version=2.1.143, reasoning_effort=max, host api.deepseek.com (official API).
- Mistral: lscb_agents:VibeNoPluginCache, -m mistral/mistral-large-4-0, version=3.1.3, thinking=high, host api.mistral.ai (Le Chat Pro plan key).
- Guards: disk <120 GB → builder prune; disk <25 GB or DeepSeek balance <$1 → SIGINT. Key-prefix scan per finished job.
- Launch (as bench, keys sourced from /srv/bench/etc/keys.env): `.venv/bin/python harness/run_150.py` first launch 00:37:11 UTC failed at startup (host_sampler.py had pilot path; fixed). Relaunched 00:39:01 UTC, runner pid 759929. DeepSeek balance at start $14.98 (user topped up).
- Same rerun/void policy as pilot (notes/pilot30-commands.md): re-run once only for pre-prompt failures or trials killed by our own guard.
- Attempt 1 (00:39 UTC) aborted at 00:54: DeepSeek b1 harbor exited after 18 s without creating a job dir (stdout is DEVNULL; manual re-run of the same command started fine, so likely a first-time dataset download race between the two concurrent harbor processes). Mistral b1 trials (~6 min in) stopped and moved to /srv/bench/lscb/jobs-aborted/run150-b1-mistral-vibe-attempt1; not scored. Relaunched from batch 1 (attempt 2).
- FINDING (01:20 UTC): Harbor's Vibe adapter passes the whole task instruction in Vibe's argv (`vibe ... --prompt=<15.9k chars>`). When Mistral runs `pkill -f '<pattern>'` to stop a test server and the pattern also appears in the instruction, it kills Vibe itself (SIGTERM, exit 143, Vibe export outcome=terminated/interrupted). Verified on run150 b1 cve-2021-46104_function: `pkill -f 'webp-server --config'` x9, and the literal string "webp-server --config" occurs once in the argv prompt. Pilot xss_codeforge_readme_render (rerun2) is the same pattern. Claude Code receives the instruction via an env var, so it is not exposed. Policy: run continues unchanged (official rows = as run); these trials are tagged `self_kill_pkill_argv`; after the run, re-run only those tasks with a prompt-from-file Vibe adapter as a separately reported sensitivity analysis.
- INCIDENT batch 1 (attempt 2): both harbor jobs stopped early. DeepSeek: 9 trials completed, then at 01:25:35 UTC all 4 running trials were cancelled and 6 never started; Mistral: same at 01:29:09 after 9 completed (4 cancelled, 6 pending). Same 6 pending tasks in both: cve-2018-13797, cve-2019-19923, cve-2022-24828, cve-2023-24827, cve-2023-35934, cve-2024-5181. Trial.run catches Exception, so an exception escaped outside a trial and asyncio.TaskGroup (harbor/job.py:1323) cancelled the rest.

harbor stdout/stderr was DEVNULL, so the traceback was lost; run_150.py now logs harbor output to data/harbor_.log. Runner paused (SIGSTOP pid 786157) at 01:31 UTC during batch-1 cleanup. Debug: NOP-agent harbor run on the 6 pending tasks (jobs-debug/debug-pending, data/debug_pending.log).

- ROOT CAUSE (~01:33 UTC): NOP-agent repro on the 6 pending tasks raised `FileNotFoundError: .../.cache/harbor/tasks/packages/last-secure-code-benchmark/cve-2024-5181_function/<hash>/task.toml` - the task cache entry held only `tests/` (partial download, most likely from attempt 1's two concurrent harbor processes downloading the same tasks). Harbor raises this outside Trial.run, so the TaskGroup cancels the whole job. Fix: moved the broken entry to /srv/bench/lscb/cache-broken/, ran `harbor datasets download last-secure-code-benchmark/last-secure-code-benchmark@v1.0 --cache` once (450/450 tasks, 0 missing task.toml). Debug job moved to jobs-aborted/debug-pending.
- Batch-1 status: 9 scored trials per arm are official. The 4 cancelled trials per arm (DeepSeek: rce_maven_build_service, cmdi_cachefs_mount_manager, cve-2023-5595, cve-2015-3902; Mistral: rce_maven_build_service, cve-2023-5595, cve-2021-36978, cve-2015-3902) are VOID (killed by harness crash) and the 6 never-started tasks (cve-2018-13797, cve-2019-19923, cve-2022-24828, cve-2023-24827, cve-2023-35934, cve-2024-5181) are pending; all run once after batch 8 as job run150-b1rest-.
- Relaunched ~01:35 UTC (VPS clock) with `--start-batch 2`; harbor output now saved to data/harbor_.log.
- Batch 2 Mistral cve-2016-6897_function: main container was already stopped when Harbor tried the plugin-cache cleanup, so the cache was not removed and `docker cp` of /logs/agent failed (linkat). Trial-level only (caught by Harbor); agent logs/Vibe export for this trial may be missing → tokens/cost unknown for it. Check result.json and why the container stopped (agent may have killed PID 1 / entrypoint).
- Batch 4: cve-2024-1086_function failed in BOTH arms with EnvironmentStartTimeoutError (environment start > 600 s, before the agent got the prompt) → pre-prompt infra failure, re-run once at the end (with b1rest). Mistral exit-143 trials in b4: xss_codeforge_readme_render_function, negative_qty_catering_order_function (self-kill check below).
- Batch 4 ended 06:07 UTC, but the runner aborted itself: `batch4 image cleanup failed (TimeoutExpired)` (docker image rm exceeded the runner's timeout). No trial affected (all 19+19 had results). Images/build cache pruned manually on the bench daemon; runner relaunched with `--start-batch 5`.
- After the batch-4 abort: cleanup-step timeouts in run_150.py raised from 120/180 s to 1200 s (takes effect on next relaunch only), and a root watcher `harness/resume_watch.sh` relaunches `--start-batch N+1` once per batch if the runner aborts on an image-cleanup timeout (logged as WATCHER lines in run150_runner.log). Trials are not affected by either change.
- Batch 8 Mistral cve-2019-15150_function: same pattern as b2 cve-2016-6897 - container init process (`sleep infinity`) was no longer running when Harbor cleaned up, so agent logs could not be copied (linkat in plugin cache). Likely the agent killed the container's init (to verify from verifier/trial logs). Agent telemetry (tokens/cost) missing for this trial.
- Mistral exit-143/137 trials so far (b1–b8 partial): 12 (see notes/sens_run150.json). `pkill -f` evidence found in 5 of them; the rest need classification (container init killed, other kill forms). Sensitivity re-run rule fixed in notes/sens_run150.json before running it.

Deviation: second infra re-run of cve-2024-1086_function (decided 2026-11-21 ~12:55 UTC, before running)

- The task's environment build failed in both arms in batch 4 and again in b1rest with `EnvironmentStartTimeoutError` (600 s). The trial log shows the timeout inside `docker compose build`: the Dockerfile walks the whole Linux kernel tree with one `sh -c` per file. The agent never received the prompt.
- Because the cause is our harness's build timeout, not the model, both arms get one more attempt in `run150-infra2-*` with `--environment-build-timeout-multiplier 3` (1800 s build limit). Agent timeout, verifier and model settings are unchanged. This breaks the "re-run once" rule and is reported as a deviation; if it fails again, the task stays unscored (infra failure) in both arms.

Provenance

- Tasks: `notes/function_tasks.json`
- Commands, settings and incidents: `notes/run150-commands.md`
- Void/re-run policy: `notes/void_trials_run150.json`
- Sensitivity rule: `notes/sens_run150.json`
- Published reference: `notes/published150.json`
- Trial rows: `run150/report/data/trials.csv` (from `report150/extract.py`)
- Runner log, host samples, pulls, Harbor logs: `run150/data/`
- Raw Harbor jobs: `run150/jobs/run150-*`
- Generator: `python3 report150/build_report.py`

Part 2: 30-task pilot

Caveat: Assistant-selected 30-task subset (seed 20261120) of the 150 function-level tasks; NOT an official LSCBench score; model+agent comparison, not model-only.

Setup

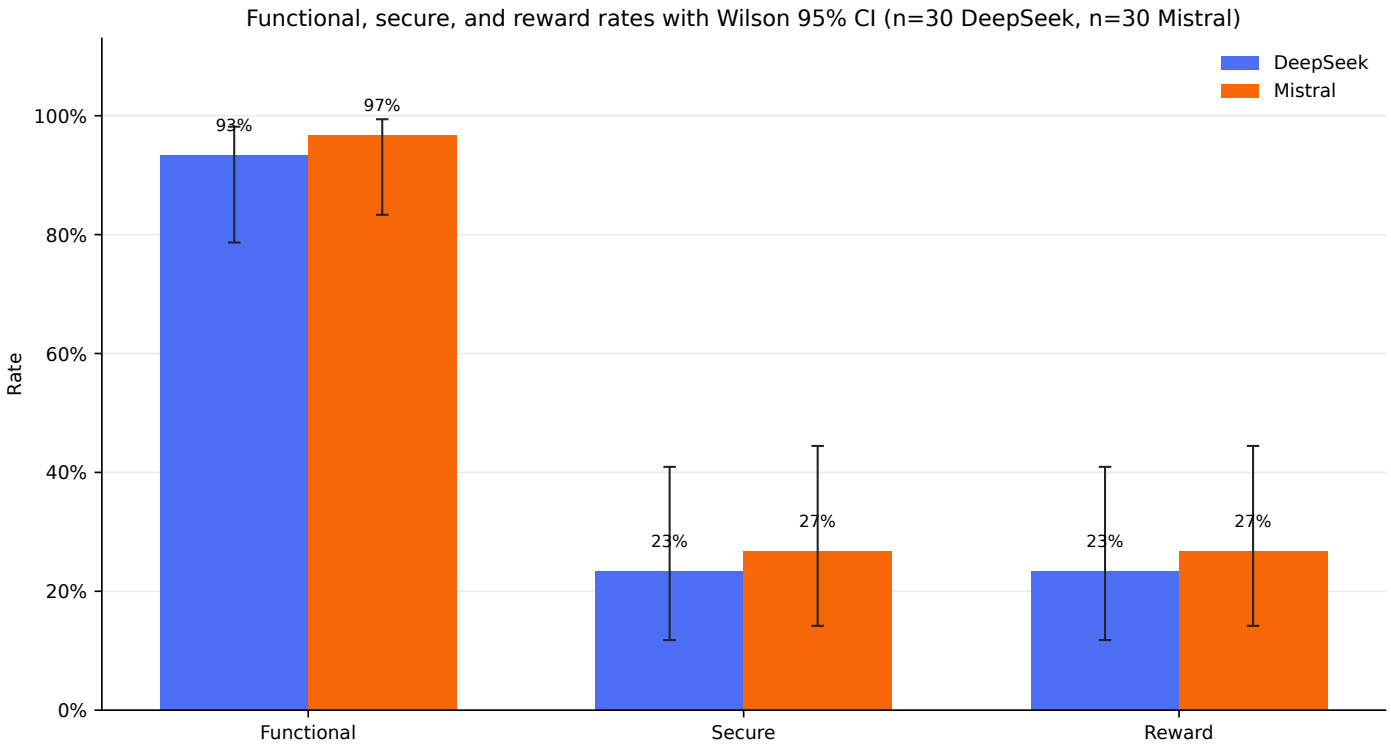
Setting	DeepSeek arm	Mistral arm	Shared / notes
Agent + version	claude-code 2.1.143	vibe 3.1.3	Custom install/cache wrappers described below
Model ID	deepseek-flash (DeepSeek-V4.1-Flash-1017)	mistral-large-4-0	Model IDs from the frozen run configuration
Reasoning	effort=max	thinking=high	-
Provider + endpoint	DeepSeek: https://api.deepseek.com/anthropic (Anthropic-compatible)	Mistral: https://api.mistral.ai (Vibe CLI, Le Chat Pro plan)	Provider endpoints used by the agents
Harness / dataset	Harbor 0.26.0	Harbor 0.26.0	last-secure-code-benchmark@v1.0
Concurrency	3 trials	3 trials	Both arms concurrent; 3 strided batches of 10; retries 0
Host	-	-	8 vCPU, 31 GB RAM, Docker 29.9.2
Run dates (UTC)	2026-11-20 17:05:33 UTC through 2026-11-20 21:32:44 UTC	2026-11-20 17:05:33 UTC through 2026-11-20 21:32:44 UTC	Timestamps and per-batch wall-clock below

Headline

Scores use only `official=1` rows. Each rate denominator is the official trial count; missing scores on an official exception are not counted as passes.

Arm	n	Functional	Secure	Reward	Exceptions	Infra failures	Input incl. cached / cached / output tokens	Computed cost	Cost per reward pass	Median agent execution (s)	Median steps
DeepSeek Flash / Claude Code	30	28/30 (93.3%, CI 78.7–98.2%)	7/30 (23.3%, CI 11.8–40.9%)	7/30 (23.3%, CI 11.8–40.9%)	1	0	58,344,396 / 56,780,288 / 823,826	$0.8993	$0.1285	116.7	23.0
Mistral Large 4 / Vibe	30	29/30 (96.7%, CI 83.3–99.4%)	8/30 (26.7%, CI 14.2–44.4%)	8/30 (26.7%, CI 14.2–44.4%)	2	0	54,278,806 / 52,406,272 / 772,606	$6.6017	$0.8252	408.4	24.0

Official rows: 30 per arm. Void trials are excluded and replaced by their re-run. DeepSeek's computed cost uses the per-row `cost_basis`; Mistral uses the Vibe export cost. Token totals omit trials without usage telemetry. Rate intervals are Wilson 95% confidence intervals with z=1.96.



Head-to-head

Paired comparison uses 30 tasks present in both arms; blank metric values count as non-passes. Exact two-sided McNemar p = min(1, 2 × BinomCDF(min(b,c); b+c, 0.5)); p=1 when b+c=0.

Metric	Both pass	Only DeepSeek	Only Mistral	Neither	Exact two-sided McNemar p
Functional	27	1	2	0	1.000000
Secure	6	1	2	21	1.000000
Reward	6	1	2	21	1.000000

Tasks with differing outcomes:

Metric	Task	DeepSeek	Mistral
Functional	cve-2020-11008_function	fail	pass
Functional	cve-2022-31032_function	fail	pass
Functional	vert_priv_module_revoke_bypass_function	pass	fail
Secure	cve-2021-4236_function	fail	pass
Secure	cve-2023-36327_function	fail	pass
Secure	vert_priv_module_revoke_bypass_function	pass	fail
Reward	cve-2021-4236_function	fail	pass
Reward	cve-2023-36327_function	fail	pass
Reward	vert_priv_module_revoke_bypass_function	pass	fail

By language and by CWE

Reward rates use official trials; n is the number of official tasks observed in that group for the arm.

By language

Language	DeepSeek n	DeepSeek reward	Mistral n	Mistral reward
c	5	2/5 (40.0%)	5	3/5 (60.0%)

Per-task results

F/S/R are functional, secure, and reward; execution time is agent minutes; total tokens are input plus output. Gray heatmap cells indicate missing scores.

Task	Lang	CWE	DS F/S/R	M F/S/R	DS agent min	M agent min	DS total tokens	M total tokens	GLM-5.3 reward	DeepSeek-V4-Pro reward

Errors & exceptions

All CSV rows with an exception are shown, including void and superseded rows. `Counted as` distinguishes official, voided/re-run, and pre-prompt infrastructure failures.

Arm	Task	Exception type	Phase	Message (first line)	Counted as
Mistral	ssrf_dms_instance_ping_function	ApiConnectionError	agent_setup	Command failed (exit 2): agent CLI	superseded by re-run (infra failure before prompt)
Mistral	vert_priv_module_revoke_bypass_function	NonZeroAgentExitCodeError	agent_execution	Command failed (exit 143): agent CLI	official
DeepSeek	cve-2019-19925_function	AgentTimeoutError	agent_execution	Agent execution timed out after 3600.0 seconds	official
DeepSeek	cve-2020-11008_function	CancelledError	agent_setup	-	void - re-run (CancelledError during agent setup after guard SIGINT)
DeepSeek	cve-2021-46104_function	NonZeroAgentExitCodeError	agent_execution	Command failed (exit 130): agent CLI	void - re-run (agent exit 130 (SIGINT) at 20:26; graded on partial code)

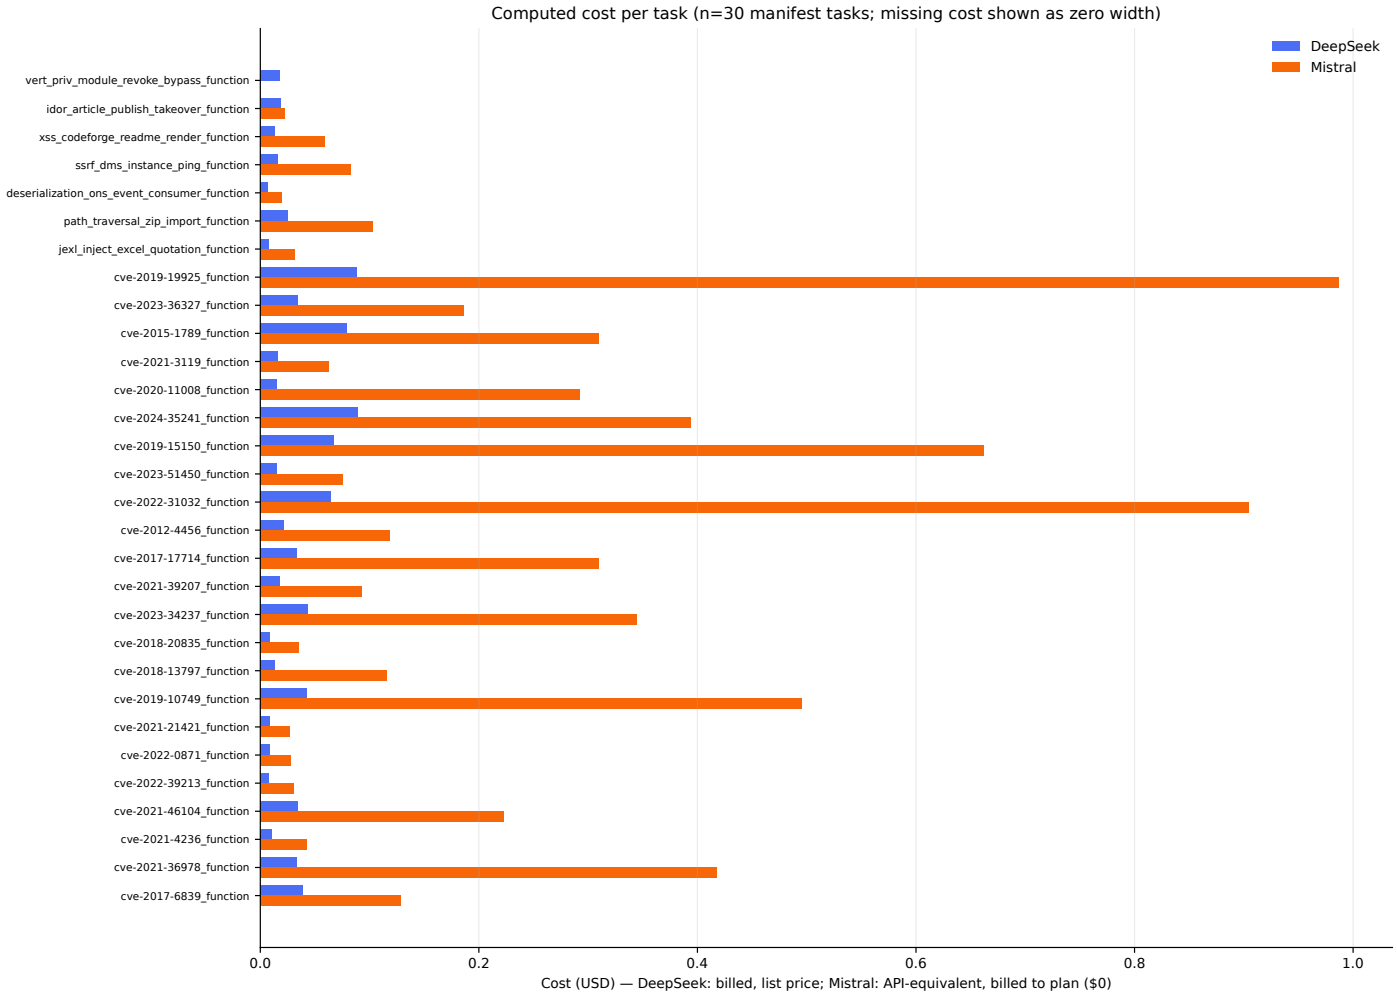
Tokens & cost

Arm	Input incl. cached	Cached input	Output	Computed cost	CSV cost_basis	Harbor cost estimate
DeepSeek	58,344,396	56,780,288	823,826	$0.8993	deepseek_list_offpeak	$57.3505
Mistral	54,278,806	52,406,272	772,606	$6.6017	vibe_export_api_equivalent	-

Cost basis: DeepSeek uses the DeepSeek-V4.1-Flash official list price recorded per row in `cost_basis` (off-peak: $0.15/M uncached input, $0.003/M cached input, $0.60/M output; peak pricing applies only where the row basis says so). Harbor's own estimate is shown alongside but was not used; it is about 63.8× the computed DeepSeek cost in this snapshot. Mistral cost is Vibe export `cost_usd` (API-equivalent); the Le Chat Pro subscription billing for these calls is $0.

Per-task computed cost:



Computed cost per task (n=30 manifest tasks; missing cost shown as zero width)

DeepSeek balance observations:

Timestamp (UTC)	Label	Balance (USD)
2026-11-20T15:44:53+00:00	before	6.13
2026-11-20T21:11:39+00:00	rerun1-end	4.98
2026-11-20T16:50:48+00:00	batch1-boundary-start	6.00
2026-11-20T16:57:11+00:00	batch1-boundary-end	5.96
2026-11-20T17:05:34+00:00	batch1-boundary-start	5.94
2026-11-20T18:10:48+00:00	batch1-boundary-end	5.61
2026-11-20T18:10:48+00:00	batch2-boundary-start	5.61
2026-11-20T19:31:26+00:00	batch2-boundary-end	5.26
2026-11-20T19:31:26+00:00	batch3-boundary-start	5.26
2026-11-20T19:33:02+00:00	batch3-boundary-end	5.26
2026-11-20T19:45:20+00:00	batch3-boundary-start	5.26
2026-11-20T20:29:50+00:00	batch3-boundary-end	5.06

DeepSeek reconciliation (balance rounded to cents; all DeepSeek rows, official + void):

Scope	Balance change	Computed cost	Rows included
pilot30-b1/b2/b3 and rerun1	$5.94 (2026-11-20T17:05:34+00:00) → $4.98 (2026-11-20T21:11:39+00:00); change -$0.96	$0.950278	34 DeepSeek CSV rows, including void trials

The rounded balance debit is $0.96 versus $0.950278 computed cost; the $0.009722 difference is within cent-rounding precision.

Incidents & deviations

- Two aborted attempts (disk exhaustion at 16:54 UTC; earlier disk guard at ~15:55 UTC) are preserved under jobs/*-aborted1 and jobs/pilot30-deepseek-cc and excluded from scores.
- Docker Hub anonymous pulls: one token-fetch failure (batch 3, first attempt) and one HTTP 429; retried; no task ran on a partially pulled image.
- Claude Code's apt-based installer fails on some old task images; a fallback uses Anthropic's native bootstrap installer for the same version (2.1.143). Trials using it are marked install_fallback=1.
- Vibe: Harbor 0.26 cannot copy Vibe's plugin cache (hardlinks) or parse Vibe 3.1.3 session logs, so a wrapper deletes the plugin cache after the run and passes --output-dir to Vibe; token counts come from Vibe's export.json.
- Re-run policy (fixed before any re-run): a trial is re-run once only if it failed before the agent received the prompt; timeouts and in-run errors count as the single attempt.
- Trials that hit the 1-hour agent timeout are still graded on the code present at timeout (Harbor behaviour).
- Mistral/Vibe self-termination: in the official xss_codeforge_readme_render_function trial (re-run 2), Mistral's agent ran `pkill -f` 9 times while 'stopping the app' after verifying its work; Vibe was then terminated (exit 143) after 20 steps. The code present at that point was graded (functional 1, secure 0).
- For the official Mistral/Vibe vert_priv_module_revoke_bypass_function trial (exit 143), the unified-session store was absent and 0 pkill/killall/kill command matches were available; cause of exit 143 not determined from logs.

Void trials and re-runs

Policy (verbatim from `notes/void_trials.json`):

Trials terminated by the runner's own disk-guard SIGINT (2026-11-20T20:25:11Z, batch 3) are void: they are excluded from scores and re-run once with identical settings. Applied to both arms. Trials that finished cleanly (no exception) are kept even if they ended after the SIGINT.

The batch-3 disk guard fired at 20:25:11 UTC when free disk fell from 34.5 GB to 5.4 GB in one minute during concurrent environment-image builds; re-runs used 2 concurrent trials per arm.

Voided job	Voided trial	Reason	Replacement job / trial	Replacement outcome

Image-pull CSV attempt counts (includes prior aborted attempts):

Batch	ok	retry_failed	failed	failed_429	timeout
1	10	0	0	0	0
2	10	0	0	0	0
3	14	1	1	0	0
rerun1	6	0	0	0	0
rerun2	1	0	0	0	0

Published timeout trials:

Arm	Task
DeepSeek	cve-2019-19925_function

Trials with `install_fallback=1`:

The job, trial, and official-status list appears in the Errors & exceptions section above.

Published context

Published reward totals for these same 30 tasks, from the LSCBench traces; these are Claude Code max-effort runs and are not directly the same arm configuration as this pilot.

Published model	Reward passes / tasks	n
GLM-5.3	8/30	30
DeepSeek-V4-Pro	10/30	30

Reproduce / files

Generator command: `python3 report/build_report.py`.

Inputs and provenance:

- Manifest: `notes/pilot30.json`

- Pilot jobs: `jobs/pilot30-b1-deepseek-cc/`, `jobs/pilot30-b1-mistral-vibe/`, `jobs/pilot30-b2-deepseek-cc/`, `jobs/pilot30-b2-mistral-vibe/`, `jobs/pilot30-b3-deepseek-cc/`, `jobs/pilot30-b3-mistral-vibe/`
- Re-run jobs: `jobs/pilot30-rerun1-deepseek-cc/`, `jobs/pilot30-rerun1-mistral-vibe/`, `jobs/pilot30-rerun2-mistral-vibe/`

Input snapshot: 70 CSV rows, 60 official rows, 30 manifest tasks; current official coverage is 30/30 DeepSeek and 30/30 Mistral.

The generator reads the frozen CSV and metadata only; it does not inspect job directories or recompute extracted trial metrics.
